

THInc. BACKUP

Managed backup as a service for servers, workstations and SaaS Applications with 24/7 self-service access for recovery.

Now your backup data can be more secure and easier to recover yourself whenever you need it with THInc. Backup.

THInc. Backup utilizes industry-leading backup and recovery technology to protect your data from risks like accidental deletion, corruption, insider attacks and ransomware. We provide a simple, secure and scalable solution to back up your company's workstations, servers and supported SaaS Applications, such as Microsoft 365, managed by Tech Heads.

- Managed service for backup and 24/7 recovery
- Air-gapped, immutable, cloud-native backups for increased data security and protection from deletion
- Implemented, managed and monitored by Tech Heads to ensure backups are running reliably

Key Service Benefits

Comprehensive managed backup and recovery

Implemented, managed and monitored by Tech Heads, THInc. Backup protects your servers and workstations across any environment: cloud, on-premises, physical or virtualized and all your data in supported SaaS Applications like Microsoft 365 and Entra ID.

Data security and compliance

- Unique air-gapped and immutable cloud-native design protects your data with ransomware resilience, ensuring it remains secure, trusted, and accessible when needed.
- Can address key requirements of GDPR, NIS2, NIST, HIPAA and similar compliance frameworks.
- Vendor-backed ISO 27001 certification

Unlimited storage/retention of SaaS Application backups

- No quotas or limits on organization data in supported SaaS Applications
- Retain data of former employees at no additional cost

24/7 data recovery

- 24/7 self-service point-in-time recovery with powerful tools for finding data needed to address litigation, compliance, ransomware, data loss, internal audits and other use cases
- Granular/targeted or full recovery of data from Endpoints and supported SaaS Applications

Why THInc. Backup?

Cybercriminals know that many SaaS Applications - like Microsoft 365 - do not include backup and that many companies' traditional backup products and protocols are vulnerable to ransomware attacks. THInc. Backup protects your organization by ensuring your data is securely backed up and protected from unauthorized deletion. With a variety of backup and recovery options, THInc. Backup makes it easy to secure and recover data, 24/7.

Data is at risk on-prem, in the cloud, in SaaS apps, and even backups themselves can be targeted.

THInc. Backup encrypts, air-gaps, and centralizes all of your backups and enables you to recover data 24/7.

More secure than traditional backups

With THInc. Backup your data is encrypted and air-gapped from your environment with a foundational protection layer to prevent deletion by threat actors.

Simplify and centralize backups

Manage data backups across Microsoft 365 and other apps, devices, on-prem servers, and cloud within one platform.

Recover data within hours, not days

24/7 self-serve point-in-time recovery with useful tools for finding data needed to address litigation, compliance, ransomware, data loss, internal audits, and other use cases.

Reduce cost and complexity

THInc. Backup manages everything in a single pane of glass and scales to meet the needs of your business

CORE SERVICE COVERAGE

SaaS Applications

Microsoft 365

Exchange Online,
OneDrive, SharePoint,
Teams

Microsoft Entra ID

Users, Groups, Roles,
Service Principals
